

SLO Scoring Template

The template may be used to organize data for SLOs.

1. First, the teacher adds the name or identification number for each student into the spreadsheet. Additional rows may be added as needed.
2. Then, the teacher enters each student's baseline score. This may be from a combination of data points and available information such as scores, the assessment administered at the beginning of the school year or from the previous year or class if available, or other measures that help to set the baseline of the student performance.
3. Next, using their completed SLO template as a guide, the teacher adds each student's established growth target.
4. The teacher will enter the final performance data for each student.
5. The teacher must enter if each individual student exceeded/ met the growth target by answering yes or no.
6. Once all the relevant information has been added in the worksheet, attainment of the students' growth targets and overall teacher rating of student growth measures on this SLO will need to be computed using the scale provided.
